

## When you think your robot is ready to turn in.....

**REMINDER #1:** Label some of the components or parts of your robot. (Under TOOLS you will find TEXT.)

**REMINDER #2:** Type the planning information that is on your planning paper. **MAKE SURE TO PUT THE SENTENCES IN THE GSA FORMAT.** You can place them anywhere you would like on your robot workspace.

**REMINDER #3:** Add some color and/or texture to the robot to make it eye-catching to look at.

Ready to turn it in?????????

**START HERE**

Go to **File**, then **Export**, then **2D graphic**. You will see this box come up. Follow the numbered yellow boxes.

The screenshot shows the 'Export 2D Graphic' dialog box. The 'Save in' field is set to 'My robot'. The left sidebar shows 'Desktop' selected. The 'File name' field contains 'Untitled.jpg' and the 'Export type' is 'JPEG Image (\*.jpg)'. The 'Export' button is highlighted. Red arrows point from yellow instruction boxes to these elements.

1. Make sure to select **Desktop** for your file destination.
2. Give the file a name that includes at least your first name.
3. Make sure the file type is **JPEG Image**. Open the **dropdown** if you need to change it.
4. Now choose **Export**. It will place this file on the Desktop.
5. Finally, you will drag this **JPEG** item to my dropbox, as you have done for 2 other assignments.
